

# Building Resilience: Data-Driven Decision Making

## Data-Driven

The practice of basing decisions on data analysis and interpretation to address specific problems and improve outcomes.

## Planning Document

A structured outline that assists in managing the collection, usage, and analysis of data to effectively address challenges.

## Data Collection

The systematic gathering of information to inform decision-making processes and enhance problem-solving abilities.

## Data Usage

The intentional application of data insights to drive strategic initiatives, optimize operations, and achieve desired goals.

## Data Analysis

The process of examining data sets to uncover meaningful patterns, trends, and correlations that inform evidence-based decision making.

## Problem-Specific

A targeted strategy that tailors data-driven efforts to address unique challenges faced by school leaders, enhancing problem-solving efficacy.
